

ABSTRACT OF THE DISCLOSURE

A door lock system for a vehicle includes a latch mechanism, a link mechanism and a housing. The latch mechanism is adapted to a vehicle door and latches the vehicle door to a vehicle body. The link mechanism includes an electric driving source and a plurality of lever members for selectively locking and unlocking the latch mechanism. The housing accommodates the latch mechanism and the link mechanism.

1. A door lock system for a vehicle, comprising:
a latch mechanism adapted to a vehicle door and latching the vehicle door to a vehicle body;
a link mechanism including an electric driving source and a plurality of lever members for selectively locking and unlocking the latch mechanism;
a housing accommodating the latch mechanism and the link mechanism.
